## **Green Initiative**

*Re: iCONN Systems, LLC Green Initiative*

It is iCONN Systems policy to develop comprehensive programs that not only create a culture of environmental responsibility, but to design and manufacture high quality and environmentally responsible products for the customers and markets we serve.

We have accepted the responsibility to recycle, reduce, or eliminate the emissions and waste that we generate and conserve energy and water wherever possible. Some of the steps we have taken to accomplish this are as follows;

- Self-contained water cooling systems for our molding equipment
- Timer controlled thermostats for heating manufacturing areas
- Timer controlled thermostats for heating and air-conditioning office areas
- Recycling
  - Aluminum
  - Paper
  - Solder Draw
  - Scrap brass and copper
  - Regrind molding resin within limits of 3<sup>rd</sup> party approvals and resin manufacturers recommendations
  - Fluorescent light bulbs
  - Printer cartridges
- All fluorescent lighting being changed from T12 to T8 style bulbs
- Re-use of packaging materials

In addition, we are continually looking for new ways to recycle and conserve energy and resources.
